

GenesisCare signs MoU for Versa HD cancer treatment systems and research agreement with Elekta

Australia and Europe's largest private provider of cancer care expands investment in Elekta's innovative radiation therapy solutions and investigates potential to treat benign diseases

STOCKHOLM – Elekta (EKTA-B.ST) announced today that GenesisCare has signed a Memorandum of Understanding (MoU) for Elekta Versa HD™ linear accelerators (linacs) to deliver radiation therapy across its growing network of oncology centers in Australia, the UK, Spain, and soon in China and South East Asia. It is valued at approximately USD 60 million. The MoU includes provisions for Elekta's MOSAIQ® oncology information system (OIS) and Monaco® treatment planning system

In a separate research agreement, GenesisCare and Elekta agreed on a number of exciting initiatives including specific research into the management of benign disease with low dose radiation therapy regimes.

In 2016, Elekta announced a partnership with GenesisCare where it invested USD 100 million in sophisticated and leading-edge Elekta technology, including Versa HD linacs and software. More recently, in August 2018, GenesisCare became one of Australia's first oncology service providers to order an Elekta Unity, the world's first high field magnetic resonance radiation therapy (MR/RT) system, to be installed in the first half of 2019.

Richard Hausmann, Elekta CEO, says: "I am very happy that GenesisCare continues to choose Elekta as it expands to bring advanced precise cancer care where it is required. This latest agreement with GenesisCare confirms that Elekta not only meets the high demands of our customers but also provides state-of-the-art treatment options for their patients. We are also excited about the research agreement with GenesisCare. Elekta believes collaboration is the key to innovation and we anticipate our joint work can result in a broader range of treatments and improved processes."

GenesisCare CEO, Dan Collins, says: "Radiation therapy is a highly effective, yet underutilized, form of cancer treatment, so we are pleased to be increasing access to this targeted technology through this new order for Elekta Versa HD linear accelerators. Bringing new technology to areas of need helps us have the greatest impact on both the patient experience and the life outcomes of more people with cancer."

The Versa HD linacs in this agreement will be delivered over seven years. This agreement is separate to those previously announced in 2016.

Elekta Unity is listed in the Australian Register of Therapeutic Goods and Medsafe New Zealand, has CE mark and is pending FDA 510(k) premarket clearance, but not available for commercial distribution or sale in the U.S.
