

Correction regarding press release: Québec to acquire advanced linear accelerators to meet growing need for advanced cancer care

The correction refers to Elekta being awarded a sole source contract for 18 linear accelerators (linacs); see updated text below.

QUÉBEC, Canada – Elekta (EKTA-B.ST) announced February 11 that the Québec government's procurement representative, Groupe d'Approvisionnement Commun de l'Est du Québec (GACEQ), has published a notice of intent to award a sole source contract to Elekta for an order of 18 advanced linear accelerators (linacs) over the next five years. Elekta was selected after a pan-Canadian public tendering process in which Québec was a participant.

Pending conclusion, the sole source contract has a total order value of approximately CAD 56 million (SEK 407 million) for Elekta.

It is widely recognized that more than half of all cancer patients require radiation therapy*. And according to the Quebec Cancer Foundation, 55,600 new cancer cases are diagnosed in the province each year and the number is expected to continue increasing. However, with this order, the province of Quebec is actively meeting the treatment needs of its inhabitants.

Richard Hausmann, Elekta's President and CEO, says: "These radiation therapy devices will have a significant impact on the lives of cancer patients and their families in Québec. It is satisfying to see that the Health Ministry and GACEQ have chosen solutions, which provide high levels of accuracy, precision and efficiency. Elekta's Versa HD allows hospitals to offer treatment modalities such as stereotactic body radiation therapy and stereotactic radiosurgery, enabling hypofractionation which increases the quality of life for patients."
